DBA*Assist Version 1.4 is a SQL*Forms application that aids the DBA in managing the Oracle Version 6.0 database. Using a simple and effective menu structure, DBA*Assist provides a powerful productivity tool to simplify Oracle database administration in the key areas below.

User Maintenance

- Query, add, and alter database users and their attributes.

Space Analysis

- Displays information screens on tablespace size, usage and fragmentation at the three distinct levels of tablespace, user and object.

Space Estimation

- Define tables and indexes and perform "what if" analysis to estimate space and proper storage procedures.

Tablespace and Rollback Segment Maintenance

- Query, add, drop, and alter tablespaces and rollback segments.

Client/Server

- Invoke DBA*Assist as a client SQL*Forms application and "manage" the target database over a SQL*Net connection.

Related Services

When you need to augment your internal resources, need specific technical expertise or are seeking to fully maximize your technology investments, partnering with Oracle Services is the answer. No one is more qualified than the Oracle Services team of consultants to help you implement, customize or integrate client-server technology.

Our 3,500 consultants in 43 countries can help you with local projects or enterprise-wide, global or multi-size implementations. We work closely with your in-house staff to ensure that the solutions are on target and to transfer the skills required to maintain and expand the completed system.

Oracle Consulting

- **Business Process Reengineering (BPR)** increases productivity by rapidly providing you with efficient, streamlined yet flexible processes and technology solutions that support your strategy.
- **Custom Application Development** draws upon our tools and CASE experience to rapidly deploy specialized, easy-to-maintain client/server applications for your business.
- **Applications Consulting** services offer experienced consultants specializing in rapidly implementing Oracle Cooperative Applications.
- **Oracle Industries** develops integrated solutions for specific industries using a combination of Oracle and 3rd party products and services.
- **Core Technology Services** help you through support, system/applications audits, performance tuning and technology upgrades.
- **Open Systems Transformation** services provide an architecture and implementation roadmap to transition systems from legacy environments to client/server.

For more information on Oracle Services, please call 1-800-578-4672 or contact your local Oracle office.
